DETAILED ACTION

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 13 and 24 are rejected under 35 U.S.C. 103(a) as being unpatentable over U.S. Patent 3,774,536 to Raymond et al in view of U.S. Patent 4,365,334 to Smith et al.

The claims recite a circuit board for controlling a printing press with inputs and outputs as disclosed by Raymond ('536, figs. 3-4).

However, Raymond does not disclose the testing of the circuit board.

The claims further recite testing the inputs and outputs of a circuit board using a program, as disclosed by Smith ('334, col. 2, line 53, and fig. 2, 32).

Thus, it would have been obvious to one of ordinary skill in the art at the time the invention was made to test the circuit board of Raymond using the system of Smith to determine whether the system is operating correctly ('334, col. 1, line 12).

Allowable Subject Matter

Claims 14-23 and 25-34 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Art Unit: 2863

The following is a statement of reasons for the indication of allowable subject matter:

Claims 14 and 25 recite, "wherein the plurality of test input signals include a function enable signal to enable a printing press function to be controlled by the printed circuit board". This feature in combination with the remaining claimed structure avoids the prior art of record.

Claims 19 and 30 recite, "wherein the printed circuit board is a dampening, registration and ink board for controlling printing press roller dampening, roller positional registration and ink roller rotational speed". This feature in combination with the remaining claimed structure avoids the prior art of record.

Claims 23 and 34 recite, "wherein the plurality of test input signals include a frequency signal to simulate a printing press operating frequency". This feature in combination with the remaining claimed structure avoids the prior art of record.

Response to Arguments

Applicant's arguments with respect to claims 1-12, filed 6-28-2885 have been considered but are moot in view of the new ground(s) of rejection.

Conclusion

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP

Art Unit: 2863

§ 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
